Barrier Skin Cream

90% GREEN, BIOBASED INGREDIENTS

Ingredient	What is it?	Purpose
 WATER	H ₂ O compound — the most abundant thing on earth!	A natural cleaning solvent; dissolves grime.
 STEARIC ACID	Saturated fatty acids made from palm trees. Used in soap and hand lotions.	Helps to coat the skin without a sticky, pasty feel.
 MAGNESIUM STEARATE	A replacement for zinc stearate and made from vegetable oil.	Inhibits materials from binding to skin and entering pores.
 SODIUM STEARATE	The sodium salt of stearic acid. The base is derived from palm trees.	Used in soap making and increases the work of stearic acid to protect skin.
 PROPYLENE GLYCOL	A highly synthesized organic compound found in medicine, cosmetics, industrial apps to replace toxic ethylene glycol.	Helps in the barrier properties and prevents dry skin as it does not mix well with water.
 GLYCERIN	Synthesized from vegetable oil. During WW2 it was used for nitro-glycerin!	Helps maintain skin moisture and condition brushes.
 LANOLIZED ALCOHOL	After sheep are sheared, the wool is washed and lanolin fat comes off the wool. Refined and provides few allergy problems.	A skin emollient and conditioner which also helps brushes.
 PEPPERMINT ESSENTIAL OIL	From the peppermint plants. Medicinal uses date back 10,000 years.	Produces a cooling sensation on skin, stimulates memory and provides a fresh scent.
 OTHER	Preservative.	A small amount is used to inhibit mold from growing in your Skin Safer!
